

A thought-provoking book on the consequences of the rise of China for the world economy. A plethora of interesting questions are proposed and investigated. In terms of current economic development, China and Poland are the most interesting, and the book has much to say about them. Given this, *China and the Future of Globalization: The Political Economy of China's Rise* is a must-read for any student of development.

Professor Edward C. Prescott, Nobel Prize Laureate in Economic Sciences

Greg Kolodko analyzes in this insightful book the economic, political and social implications of China's rejuvenation of her historical place to the world. The book is an essential reading on a subject of the highest importance in the early 21st century.

Justin Yifu Lin, Dean, Institute of New Structural Economics, Peking University, Former Chief Economist, the World Bank

A fine reflection on China's rise, offered with neither fear nor favor but in the pragmatic spirit that is Professor Kolodko's stock-in-trade.

James K. Galbraith, The University of Texas at Austin

Grzegorz Kolodko has written a concise, erudite, balanced and perceptive book on the global implications of China's unstoppable rise. We are moving, inescapably, into a multi-polar and multi-cultural world. We must embrace this future. The notion of a new "cold war" with China is folly. Mutual respect and co-operation offer humanity its only tolerable future.

Martin Wolf, Chief Economics Commentator, *Financial Times*
